

# Enable / disable OnePop mode

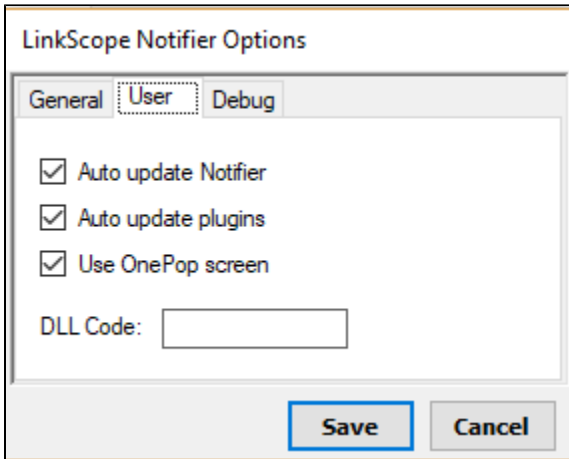

OnePop is the feature that Notifier will include all screen pop windows and call information into one window.

From OnePop window, user can see the screen pop history, experience of a call (FCR), can request a callback and perform the actions for each screen pop feature such as email, chat, screen sharing, video sharing.

## Step-by-step guide

In order to enable / disable OnePop feature, do the following steps:

1. Run Notifier, go to menu **Tools -> Options**
2. Click on tab **User**
3. Check / uncheck "**Use OnePop screen**" option to enable / disable OnePop feature.

4. Click **Save** button
